Haman Genome Sequencing of Medicine, One Baylor Patas, Horston, Try 7030, 1920 College of Medicine, One Baylor Patas, Horston, Try 7030, 1920 College of Medicine, One Baylor Especial Sequence of this sequence version replaced gi:2515924.

On Nov 13, 2002 this sequence version replaced gi:2515924.

The sequence of this sequence or combination of Baylor Based reads and whole genome shorgun sequencing reads assembled using A.Lisa in the Facture table below registrating as seal control described in the Results table. Denitor represents a socificial in the A.Lisa in the Facture table below registed and crimendes and separated by discal gaps filled with Ns to the setting size. The sequence contriger within a contriger-coaffold that consists entirely of whole genome shorgun sequence cands. Both end sequences and whole genome sincepum sequence only yourly set will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Conter Tay, Auction Bailton

In the novel beta. like subunit is useful for producing a therapeutic agent which is useful treating pain in a patient. The subunit can be expressed by standard recombinant methodology. The presents ageque expressents a human novel sociam channel beta. Like

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; reproductive system related antigen; reproductive system disorder;
                                                                                                                 The present invention describes essemblages and computer readable media comperizing proval human cDNA sequences and clones detrived from human forth sequences and clones detrived from human flowers. Edetal Kindry, maintained, restricted and saydable CDNA illibraries. ABA93702 to ABA93766 represent human CDNA sequences from the present invention which encode the proceins given in ABB05662 to ABB0529. The human CDNA sequences and clones can be used in gene cample they may be used in profiling assays, for applications, for example they may be used in profiling assays, for providing large arrays of human genetic meterial for implementing large-scale screening strategies and for Incanting diseases via gene therapy procedures.
                                                                                                                                                                                                                                                                                                                                                                                                                          9
             Human cDNA sequences and clones derived from human fetal brain, fetal kidney, melanoma, testis and amygdala cDNA libraries, useful in genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        TCCCTAACTCCATCAGACCTCTACGCACCATAAGACTCTGCCAGAACTGAGAAGCC 1687

```
The present invention provides the protein and coding sequences of a number of human reproductive system related anyigns. These can be used in the prevention and treatment of reproductive system disorders, including cancer. The present sequence is a genomic sequence encoding a process of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated nucleic acid molecule encoding a reproductive system antigen is used in preventing, treating or ameliorating a medical condition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Disclosure, SEQ ID NO 7659; 1297pp + Sequence Listing; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention provides the procein and coding sequences of 973 human testicular antiques, and fragements of their genomic sequences. The sequences can be seed in the treatment of cardiovascular, urinary system, respondences can be system, minimar, respiratory, meurological and system, system, respondences in the present sequence is a man or especially cardious. Infections, infections, especially cancer, proceeding the present sequence is a DNA encoding a protein fragment of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             33 AGGIGGCCTGAACACCTGAGGGACTGGACATCCCATGTTCAGCAATGTCAATGGCATCAG 92

the present investion describes an isolated egenomic polymuclastide (1), which is obtainable from the pis region of human chromosome 11. (1) the pis selection of the pis region of human chromosome 11. (1) the pis selection of the pis region of the pis region of human chromosome 11. (1) the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selection of the pis selectio
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New genes obtainable from the pis region of human chromosome ill (e.g. human adhate-scute homolog 3), useful in gene therapy, patricularly for preventing or treating tumor growth, infertility or hepatitis C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              conditions. These conditions include tumour growth, infertility, or negatitis C virus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; benign prostatic hyperplasia; BPH; prostate cancer; gene; ds.

Screening for anti-neoplastic agent involves exposing cells to a descript agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set Claim 1; SEQ ID 1231; 44pp; English

The present invention describes a method (MI) for screening for an auti-mochlatic describer he method involves expessing cells to a chemical agent to be tested for anti-mochlatic activity, determining a change in expression of a talest one upon (I) of a signature gene each, where (I) comprises a sequence (S) selected from 647 sequences (given in Asiacises (COMINIO) or Is at less 19% identical to (S), where a change in expression is indicative of anti-mochlatic activity. (I) has opposed to

anti-inexplastic agent. The method involves exposing cells to a chemical anti-inexplastic agent. The method involves exposing cells to a chemical anti-inexplastic agent. The method involves exposing cells to a chemical expression of at least one gene (1) of a signature gene set, where (1) conceptses a necession of at least 54 identical to (8), where a change in concepts a necession is influente of a net inexplastic activity. (1) has organized to ABIVIDIO, or is at least 55 identical to (8), where a change in the expension is influente of anti-inexplastic activity. (1) has organized and one be used in gene therapy. Mr can be used for correcting a strict incorporate and one to use and the properties of the seent. Mr can be used in the creating of treatment of an Tomber of the seent. Mr can be used in the creatment of cancer such as orlon, breast, stometh, lung, thyroid, adeptocation and/or properties of pancessic cancer, stomethy and the control of the seent of pancessic cancer.

The second of the control of the seent of pancessic cancer, adeptocation of adeptocations of actions and white of cancer will interacting quick a cancer will cancer a general cancer. The second of the sections and while the cancer will be cancer will be a cancer will be cancer will be a cancer of pancessic and the cancer will be cancer will be cancer will be cancer.

Horrigan S; Endress G, Ebner R, "PI; 2002-188264/24.

Screening for anti-neoplastic agent involves exposing cells to a otherwisel agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set Claim 1; SEQ ID 7935; 44pp; English. The present invention describes a method (M1) for screening for an anti-neoplastic agent. The method involves exposing cells to a chemical

Security to be tested for anti-inoplastic exceptivity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) of comprises a sequence (s) set-feted firm shall add to sequence (s) where a change in comprises a sequence (s) and the set of set least 584 identical to (6), where a change in the compriser of set in the set of set of set of set least 584 identical to (6), where a change in the set of ö 1112 carccorrearecarecarecereceretarecereceretareceretarecerecere 105 CTTCCCTTCATGCATCCATTGTTCTTTCATTCATCCATACATCCACCTGCCTCTG 164 Gaps ö DB 24; Length 3768; 1052 Arcarccrccrccarccarcrarccarcarcacccarc 165 AGCTITCACCTCTGACTCCCTAACTCCATCAGACCTCTACGCACC 209 Indels Sequence 3768 BP; 1030 A; 730 C; 1089 G; 919 T; 0 other; 3; 0.039; 42; Pred. toolsted mucleotide sequences of Neigearia meningitidis which can be used in the disaposis and treatment of N. meningitidis infection and other Neigearia infections, for example, N.gonorthosa.

WPI; 2000-318079/27.

Claim 7; Page 1535; 1760pp; English.

The present invention describes methods of obtaining immunogenic proteins from Neisseria agenomic sequences. AAABA145 to AAABA214 represent poscifically claimed Neisseria meningitidis genomic DNA

NPI; 2001-483426/52

Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis -

AME/4551 to AME/4702 encode the human immune/hamestopoicatic antigen (I) amino acid sequences given in AME/2710 to AME/3721. (I) have optostatic activity, and can be used in gene therapy and vectine production. (I) proceins and polymoutonoides may be used in the prevention, disponess an treament of diseases associated with imappropriate (I) expression. For example, they may be used to treat disporters associated with decreased expression by rectifying mutations or detailons in a patient's genome Disclosure; SEQ ID NO 28309; 3071pp + Sequence Listing; English.

14-AUG-2000;

ö ther affect the activity of (1) by expressing inactive process or to supplement the patients own production of (1). Additionally, (1) polymotleoxides may be used to production of (1). Additionally, (1) proceeds may be used to produce the serveted (1), by insertling the modific acids into a host cell and culturing the cell to express the procedul. (1) proceins and solvant-forestive may be used to prevent, diagnose and treat immune/haemstopoietic-related diseases, especially additional and an expense the manus immune/haemstopoietic-derived calls. Additional to Addition genomic of Additional the present human immune/haemstopoietic antices genomic of Additional and property and process and control process and control and process and Human, immune; haematopoietic; immune/haematopoietic antigen; cancer; cytostatic; gene therapy; vaccine; metastasis; ds. AMES4951 to AME64702 encode the human immune/haematopoietic antigen (I) amino acid sequences agiven in Amed2100 to AMMS1701 to AMMS1701 to AMMS1701 to Constitution and asquences agiven in Amed210 to AMMS1701 to Constitution. (I) trace options and activity, and watches and constrained and applymentation of the presentation of the amen and polymentace title and the prevention, dispenses and constrained and polymentace title amen and activity of (I) by expressing inactive procession. For that affects the activity of (I) by expressing inactive process of production of (I). Additionally, (I) that affects and offers and production of (I). Additionally, (I) to apply a control of the affects of the affects of production of (I). Additionally, (I) the ammental of the amental and polymental control of the amental and polymental control of the amental and polymental control of the amental and polymental control of the amental and activity of the amental and activity of the amental and activity of the amental and activity of the amental and activity of the amental activity of the amental and activity of the amental activities of the amental acquence and the present invention. Amental acquence for account and activity of the amental acquences and control invention. Amental acquences and control invention. Amental acquences and control in the amental acquence of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Mucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and meastesis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; SEQ ID NO 28310; 3071pp + Sequence Listing; English.

This protein is involved in the generation of pain and other sensory or perceptive nerve impulses, in the establishment and enhance of mod, neurodegenerative and sleep disorders, and in the control of muscle contraction, including movements such as the heartback deligation and vascular cone. The sequences can be used in predictive medicine, sorteening and diagnostic
